$$\text{gram: } \text{ng} \xrightarrow{x10^{-3}} \text{mcg} \xrightarrow{x10^{-3}} \text{mg} \xrightarrow{x10^{-3}} \text{g} \xrightarrow{x10^{-3}} \text{kg}$$

$$\text{BMI} = \frac{\text{weight (kg)}}{\text{height (m)}^2}$$

$$\text{IBW} = h + 2.3 \times 1 - 6.5$$

$$\text{Body Surface Area (cm}^2) = \sqrt{\frac{\text{weight (kg)} \times \text{height (m)}}{3.600}}$$

$$\text{volume: } \text{ML} \xrightarrow{x10^3} \text{ml (cm}^3) \xrightarrow{x10^3} \text{l (dm}^3)$$

ex - how many mole of Aspirin in 300mg

Aspirin 300mg 10b

$$n = \frac{m}{M} = \frac{300 \times 10^{-3} \text{ g}}{180.2} = 1.665 \times 10^{-3} \text{ mol}$$

$$\text{length: } \text{m} \xrightarrow{x10^2} \text{cm} \xrightarrow{x10} \text{mm} \xrightarrow{x10^3} \mu\text{m} \xrightarrow{x10^3} \text{nm}$$

Temperature

$$2 \text{ degree Fahrenheit (}^{\circ}\text{F}) = 5/9 \text{ degree Kelvin (}^{\circ}\text{K)}$$

$$n = \frac{m}{M} \quad n = \text{no. of moles}$$

$m = \text{mass (g)}$

$M = \text{Molecular weight (MW)}$

**Amount of NaCl to make isotonic
(add to 100ml - adjust if > or < 7)**

$$\text{NaCl} = 0.9 - (\text{SCE} \times \text{amount of substance (g)})$$

$$c = \frac{n}{V} \quad c = \text{concentration (g per L or g per dm}^3)$$

$n = \text{number of mole}$

$V = \text{volume (L or dm}^3)$

$$\text{female} \times 0.85$$

$$m = cnV \quad m = \text{mass (g)}$$

$c = \text{concentration (mol per L or mol per dm}^3)$

$V = \text{volume (L or dm}^3)$

$$\text{CrCl} = \frac{(10 - \text{age}) \times \text{IBW}}{(\text{ml/min})}$$

$$0.815 \times \text{Sect} \text{ (micromol/L)} \\ \text{male} = 50 \text{ kg} + 0.9 \text{ kg} \times \text{cm} > 152 \text{ cm}$$

$$c_1 V_1 = c_2 V_2$$

$$\frac{\text{age}-18.29-78.16}{30-39-72} \text{ ml/min}$$

Example of $n = \frac{m}{M}$: calculate volume of chlorhexidine gluconate solution 8% added to 200ml of water so that final concentration of chlorhexidine (from 0.8%) is 0.2%
chlorhexidine Ferrous sulphate mixt AFR contains 37% Ferrous sulphate. If a patient is required to take 10 ml TDS, how much elemental iron are they ingesting on a daily basis?

$$\text{Fe} = 55.8 \% \quad \text{Fe SO}_4 \cdot 7 \text{ H}_2\text{O - MW} = 278$$

$$\text{mixt} = 37\% \text{ Ferrous sulphate} = 3 \text{ g} / 100 \text{ ml} = 0.03 \text{ g in 10 ml} \\ = 0.9 \text{ g daily} \\ n = \frac{m}{M} = \frac{0.9 \text{ g}}{278} = 0.0032 \times 0.9 = 0.002864 \text{ g} \\ = 2.864 \text{ mg}$$

Example CrCl - what volume of Acetic acid B.P (33% w/w, w/m=1.04) is required for the preparation of 2 L of a solution containing acetic acid at a concn of 10% w/v? MW acetic acid = 60

acetic acid concn = 3.3 g in 100 g

$$\text{CrCl} = c_2 V_2 \quad 0.33 \text{ g per ml} = 0.33 \times 1.04 \text{ g per ml}$$

$$34.353 \times V_1 = 10 \times 2000 \text{ ml}$$

$$V_1 = \frac{10 \times 2000}{34.353} = 58.2 \text{ ml}$$

$$= 0.34353 \text{ g per ml} \times 1000$$

$$= 34.353 \text{ g}$$

Drug Common doses:

Prednisolone: Croup - 1mg/kg, asthma - 1-2mg/kg - max 60mg \rightarrow same immune (12-24 hrs) conc daily for 3-5 days \rightarrow or inflammatory disease

Ibuprofen: 5-10mg/kg - max 400mg, 3-4x a day

Paracetamol: 15mg/kg - every 4-6 hrs.

Normal lab values

UAT - (36-146 mmol/L)

Urea breath test

Chloride - 98-106 mmol/L

Lipoprotein

K+ - 3.5-4.5 mmol/L

(part) Lipocream

(part) Bifilm

Allegation question

- Used when mixing two products w/ different % strengths of the same active ingredient
- Strength of final product will fall between the strengths of each original product

Examples.

- Dilute ointment - 14% sulfur w/ petrolatum 0%. to make 60g ointment containing 10% sulfur. How many g of 14% sulfur & petrolatum 0%, will be necessary to make the dilution?

$$\begin{array}{c} 14 \\ \swarrow \quad \searrow \\ 0 \quad 10 \end{array} = 10 \text{ parts of } 14\% \text{ sulfur} \rightarrow 14\% \text{ sulfur: } \frac{10}{14} \times 60 \text{ g} = 42.9 \text{ g of } 14\% \text{ sulfur}$$

$$= 14 \text{ parts total.}$$

$$\begin{array}{c} 0 \\ \swarrow \quad \searrow \\ 14 \quad 10 \end{array} = 4 \text{ parts of petrolatum} \rightarrow \text{Petrolatum } 0\%: \frac{4}{14} \times 60 \text{ g} = 17.1 \text{ g of petrolatum}$$

- Prepare 1L of 20% alcohol solution using 90% alcohol & 10% alcohol

$$\begin{array}{c} 90 \\ \swarrow \quad \searrow \\ 0 \quad 10 \end{array} = 10 \text{ parts of } 90\% \text{ alcohol} \rightarrow 90\% \text{ alcohol: } \frac{10}{90} \times 1 \text{ L} = 0.125 \text{ L of } 90\% \text{ alcohol}$$

$$= 80 \text{ parts total.}$$

$$\begin{array}{c} 10 \\ \swarrow \quad \searrow \\ 0 \quad 70 \end{array} = 70 \text{ parts of } 10\% \text{ alcohol} \rightarrow 10\% \text{ alcohol: } \frac{70}{100} \times 1 \text{ L} = 0.875 \text{ L of } 10\% \text{ alcohol}$$

- How much NaCl 10% stock solution should add to 100mL of NaCl 0.45% solution to make normal saline - 0.9%?

$$\begin{array}{c} 10 \\ \swarrow \quad \searrow \\ 0.45 \end{array} = 0.45 \text{ parts of } 10\% \text{ NaCl}$$

$$= 9.55 \text{ total parts}$$

$$0.45\% \quad 9.1 \text{ parts} = 9.1 \text{ parts of } 0.45\% \text{ NaCl}$$

$$\frac{9.1}{9.55} \times t = 100 \text{ mL}$$

$$t (\text{total volume}) = \frac{100}{9.1/9.55} = 104.95 \text{ mL Final volume}$$

$$\text{NaCl 10% required: } \frac{0.45}{9.55} \times 104.95 = 4.95 \text{ mL of NaCl 10%}$$

Stock solution to add to 100mL of NaCl 0.45% solution to make saline 0.9% NaCl

Iso tonic questions

- How much NaCl should be added in the preparation of 25mL of pilocarpine HCl 2% eye drops to render them isotonic - SCE: 0.24

$$\text{NaCl} = 0.9 - (\text{SCE} \times \text{amount of substance}) = 0.9 - (0.24 \times 2) = 0.42 \text{ g}$$

$$= \text{amount of substance} = 2 \text{ g}$$

$$0.42 \text{ g} = 0.42 \text{ g for } 100 \text{ mL solution}$$

$$= 0.105 \text{ g in } 25 \text{ mL solution}$$

$$= 105 \text{ mg}$$

- Iso tonic eye drops using:
 - phenylephrine HCl 1% w/v
 - chlorobutanol 0.5% w/v
 - NaCl to make isotonic → how many grams?

$$\text{SCE - Phenyl HCl} = 0.32$$

$$\text{SCE - chlorobutanol} = 0.21$$

$$\begin{array}{l} \text{phenylephrine HCl 1% w/v make } 25 \text{ mL} \\ \text{chlorobutanol } 0.5 \text{ w/v } 0.25 \text{ g } 0.32 \\ \text{Sodium chloride } - \quad x \text{ g } \quad 1 \quad x \text{ g} \end{array}$$

$$0.25 \text{ g } \times 0.32 = 0.08 \text{ g}$$

$$0.08 \text{ g } + x \text{ g } = 0.22 \text{ g}$$

$$0.22 \text{ g } = 0.11 + x$$

Dilution

- Dilute 10g 10% Lipocream to concn - 0.0025%.

hydrocortisone butyrate is how many grams to dilute of lipocream to dilute hydrocortisone butyrate - 0.1% You have unopened 30g tube of 10% Lipocream - how many grams of lipocream to dilute dilution factor = $0.1/10$ (initial concn) = 40

$$= \text{originally diluted } 0.0025\% \text{ (final concn)}$$

$$= \text{quantity of lipocream} = 39 \times 10 \text{ g} = 39 \text{ g of lipocream to make } 0.0025\% \text{ Lipocream from } 10\% \text{ dilute}$$
